

Peganov Nikita

Backend Developer

Backend developer with experience in highload systems and project management. Specialize in Python and Go with 3 years of production experience. I am in Moscow and ready to move.

EXPERIENCE

Yandex

May 2026 — Now

Tech Lead, Go — control-plane rewrite for load balancer infrastructure

- conceived and got management approval for a full control-plane rewrite
- recruited and lead a team of 3 engineers, designed the architecture, passed design review
- cut rollout time from 15–20 to 3–5 min and interventions from 8–10% to under 1%

Yandex

February 2023 — Now

Middle Python Developer in Infrastructure L3 Management

- reduced the service status update time from 7 minutes to 1 minute using database denormalization
- built a load balancer allocator (heuristic + MILP) that rebalanced 1,000 services in 3 hours
- integrated mechanism for providing alerts to users that sends alerts within 30 seconds

Yandex

July 2022 — October 2022

Intern Python Developer of a compensation calculation system in HR-Tech

- added processing of uploads to the system reducing user work time by 50%
- implemented uploading of all user data to the cloud to increase system fault tolerance

Yandex

July 2021 — November 2021

Intern Python Developer in traffic management team

- reduced by 50% the load on the servers with DB by translating readonly requests to replicas
- added ipv6 processing into balancers' work allowed to use new ip's without extra 900 lines
- created an internal library redirecting the request to the nearest datacenter

PROJECTS

Tinkoff

October 2023 — April 2024

Java Developer, Project Manager

Tukach: The system for accepting applications for violations of corporate ethics

- developed a telegram bot for accepting applications that received 90% positive reviews
- assembled a team of 4 developers and led it, all deadlines were met
- collected the requirements from the customer, came up with several additional ideas

Huawei

November 2021 — May 2022

Python Developer, Data Scientist

Research work «Reinforcement learning for resource allocation tasks in the cloud»

- tested the applicability of reinforcement learning in real conditions
- created and trained a neural network processing 4500 requests per hour
- the total number of processed requests was 1.5 million

Startup SmartLearning

November 2020 — March 2021

Kotlin Developer, development of the Android-application for quick learning

- assembled and managed a team of 4 developers
- developed an Android application downloaded by 183 users
- took the 19th place at the HSE Fest startup competition

EDUCATION

Higher School of Economics

September 2024 — July 2026

Master in AI Research & Entrepreneurship, GPA 8.8/10

- Graduated courses with excellence: Computational Complexity Theory, GPU Computing, Deep Learning, Bayesian Methods, Multi-Agent Systems

Higher School of Economics

September 2020 — July 2024

Bachelor in Computer Science

- Graduated courses with excellence: C++ Programming, Introduction to Applied Analytics, Databases, Calculus, Discrete Mathematics, English for Business Purposes

COMPUTER SKILLS

Python (Django,

numpy, sklearn)

Go (goroutines,

Temporal, gRPC)

Java (Sockets,

Multithreading, Derby,

Spring)

C/C++

(Multithreading, STL)

C#

(Requests)

Kotlin (Android)

Databases

(SQLite, PostgreSQL, Redis)

TECHNOLOGIES

Linux

gRPC

Docker

Kubernetes

CI/CD

Telegram API

LANGUAGES

English (C1)

Russian (Native speaker)

ACHIEVEMENTS

Winner of ITMO "Open Olympiad of schoolchildren in computer science" (2020)

Winner of "United Mathematical Olympiad of schoolchildren" (2020)

Medalist of Olympiad of schoolchildren "Fiztech" in mathematics (2020)

Medalist of regional stage in All-Russian Olympiad of schoolchildren of CS and ICT (2019)

OTHER COURSES

Software Architecture: Advanced Program (2026)

Summer School of **Russian Association of Artificial Intelligence** (2021)

Tinkoff Generation (2019)

Samsung IT-school (2018)
